

SUMMARY

Accomplished Frontend Developer/Designer with 5+ years of experience designing, building, and supporting high-performing, responsive, and user-friendly web applications using ReactJS, JavaScript (ES6+), TypeScript, and jQuery, with strong proficiency in state management (Redux) and RESTful API integration, including asynchronous request handling. Skilled in translating UI/UX design wireframes and business requirements into clean, high-quality, and maintainable code with a strong focus on performance optimisation, scalability, cross-browser compatibility, and WCAG accessibility standards. Experienced with Git-based version control, Webpack, Babel, SASS/LESS, and Jest, and skilled in secure frontend coding practices. Proven ability to manage competing priorities, meet tight delivery timelines, and proactively flag and resolve risks under pressure. Collaborative and communicative team player experienced in Agile environments, working closely with cross-functional teams and stakeholders to deliver seamless, high-quality user experiences.

TECHNICAL & PERSONAL SKILLS

- Proficient in JavaScript (ES6+), TypeScript, jQuery, and core front-end technologies including HTML5, CSS3, SCSS/Sass, and LESS
- Experienced with React.js, React Hooks, Redux, and Redux Toolkit, with a strong understanding of component-based architecture, reusable UI components, and scalable front-end development
- Skilled in building consistent UI systems using Bootstrap, Tailwind CSS, Material UI, and Styled Components
- Strong understanding of responsive and adaptive design, applying mobile-first and cross-browser development practices
- Proficient in delivering accessible, high-performing user interfaces aligned with WCAG standards, improving usability, cross-device experience, and product consistency
- Skilled in web performance optimisation techniques, Google Search Console monitoring, Core Web Vitals, cross-browser compatibility, and scalability
- Experienced with modern front-end build and module tooling, including Webpack and Babel, to configure, bundle, and optimise React applications for production
- Experienced with token-based authentication (JWT), OAuth/OAuth2, and session-based authentication
- Proficient in implementing secure frontend coding practices including input validation, secure session handling, and defence against common web vulnerabilities
- Proficient in integrating RESTful APIs, GraphQL, and web services into frontend applications, including defining API contracts and managing asynchronous request handling to support dynamic, user-focused experiences
- Familiar with back-end technologies such as PHP, Laravel, and Django with understanding of API routing, middleware, and server-side logic relevant to UI interactions
- Experienced with version control systems including Git, GitHub, GitLab, and Azure DevOps, with hands-on experience in automated delivery workflows using GitHub Actions and TFS.
- Experienced in supporting web interfaces through to release, including stability checks, regression testing support, and post-deployment issue resolution
- Proven ability to proactively identify and escalate risks, blockers, and technical issues early to maintain delivery momentum in high-pressure environments
- Familiar with automated unit, functional, and UI testing using Jest and React Testing Library within CI/CD environments.
- Strong understanding of clean code practices, SOLID principles, component-based architecture, code refactoring, maintainability, and scalable front-end development
- Skilled in debugging, troubleshooting, root cause analysis, and performance analysis to enhance existing applications
- Experienced in translating complex business requirements into clean, reusable, user-focused, and efficient code
- Experienced collaborating across multiple delivery, integration, and platform teams in complex operational environments to ensure seamless UI integration and on-time delivery
- Experienced in Agile (Scrum) and Waterfall methodologies, with proficiency in lifecycle management tools including Jira, Trello, and Microsoft Teams
- Self-motivated and detail-oriented, with strong problem-solving skills, and a growth mindset

- Experienced in peer collaboration, code review participation, continuous integration, documentation, and providing constructive feedback to support team delivery and reduce key-person dependency and maintain robust codebases
- Strong communicator with the ability to clearly explain technical concepts, progress, and issues to both technical and non-technical stakeholders across all levels.

WORK EXPERIENCES

Nextmedia Pty Ltd | Front-end Developer and Designer

April 2025 - current

Nextmedia Pty Limited is an Australian media company headquartered in Sydney and part of the Forum Media Group, delivering specialist content and industry-focused publications.

Responsibilities & Achievements:

- Design, develop, and support responsive, production-ready web interfaces using HTML5, CSS3, SCSS/SASS, Bootstrap, JavaScript, and jQuery across 2 client-facing publications while managing code changes via SVN version control, ensuring interfaces remain stable, secure, and scalable.
- Collaborate closely with backend developers and cross-functional teams to integrate responsive UI components into .NET and PHP-based applications, ensuring seamless end-to-end functionality across delivery and integration teams.
- Build and maintain reusable UI components and contribute to a shared component library, while managing CMS-driven content updates and refining interface interactions based on stakeholder feedback to deliver consistent, user-focused experiences.
- Translate business requirements into responsive, accessible, and reliable UI components aligned with WCAG standards (WCAG 2.1), delivering measurable gains in accessibility, usability, and cross-device consistency.
- Monitor and optimise Largest Contentful Paint (LCP) and other Core Web Vitals using Google Search Console, improving page load performance and organic search visibility.
- Use Google Analytics to monitor site traffic and user behaviour, informing UX and content decisions across client-facing publications.
- Improve front-end performance and Core Web Vitals through image optimisation, layout stability checks, and performance enhancements, contributing to a 15% faster time-to-content in production environments.
- Design high-fidelity mock-ups and interactive UI concepts using Adobe Creative Cloud, translating designs into responsive, production-ready applications aligned with client goals and business requirements.
- Create wireframes and interactive prototypes using Adobe XD and Sketch to validate user flows and interface behaviour ahead of development.
- Redesigned the site's UI/UX for content discovery and navigation, replacing multi-step filters with quick-link tiles and smart search, and shipped it as responsive, production-ready frontend code that nearly doubled pages viewed per visit (up 148%), doubled pages viewed per search, grew daily visits 41%, and lifted daily transactions 55%.
- Participate in code reviews, contribute to CI practices, and provide constructive feedback to peers.
- Partner with cross-functional teams including designers, product managers, backend engineers, and platform teams within Agile ceremonies, sprint planning, stand-ups, reviews, and retrospectives to manage competing priorities and ensure timely, high-quality feature delivery.
- Implemented Single Sign-On (SSO) authentication for site users, streamlining secure login and session management across client-facing publications.
- Proactively debug, troubleshoot, and conduct root cause analysis on UI, performance, and functionality issues, resolving risks and blockers early to keep delivery on track and improve product stability under tight timelines.
- Support testing and QA activities by validating features across browsers and mobile devices to ensure consistent, reliable user experiences.
- Maintain clear technical documentation to support smooth handovers, reduce key-person dependency, and ensure consistent implementation standards.

Bernet | Front-end/UI Developer

Jun 2021 – November 2024

Bernet is an IT company specializing in software development, offering web and mobile solutions, consulting, and training for businesses and government agencies across industries like print, IT, and finance.

Responsibilities & Achievements:

- Delivered end-to-end web projects using JavaScript, jQuery, React.js, HTML5, CSS3, SCSS, Bootstrap, Tailwind CSS, and Material UI, building responsive, stable, and user-focused interfaces aligned with business and client needs.
- Developed React applications in TypeScript across multiple projects, using Redux, Redux Toolkit (RTK), and Context API for state management and implementing strongly typed components, interfaces, and props to reduce runtime errors, improve code reliability, and support scalable, maintainable UI development.

- Built and maintained reusable UI components and scalable component libraries using Tailwind CSS and Material UI, supporting consistent design patterns across digital products.
- Integrated multiple RESTful APIs and GraphQL APIs into frontend systems across projects including a shop-builder platform, ensuring smooth data flow and asynchronous request handling between backend services and user interfaces to support dynamic, data-driven experiences.
- Merged Django-based templates with modern JS components to enhance template rendering for interactive web applications.
- Implemented JWT & OAuth/OAuth2-based authentication with secure session handling, support enterprise-grade user access.
- Collaborated with UI/UX designers to translate mock-ups from Figma, Adobe XD, and Photoshop into fully functional, pixel-perfect, and responsive web interfaces.
- Applied secure frontend coding practices including input validation, defence against common web vulnerabilities, and secure data handling to maintain stable, reliable production interfaces.
- Enhanced load and UX performance through lazy loading, code splitting, asset minification, and caching strategies, alongside SEO best practices including structured data, improving Core Web Vitals, page speed, accessibility, and cross-device experience.
- Applied responsive design, SEO best practices, and performance optimisation techniques to ensure usability, accessibility, page speed, and cross-device experience.
- Achieved up to 46% improvement in print web application load time through code refactoring, advanced JavaScript optimisation techniques, and enhanced UI component responsiveness.
- Led a legacy code refactoring initiative that reduced technical debt by 60%, improving performance, readability, and long-term maintainability of the codebase.
- Partnered with backend teams to develop and maintain e-commerce platform features including ticketing, complaints, reporting, appointing, and shipment systems, specifying and refining API requirements for seamless front-end integration.
- Proactively identified, flagged, and escalated technical risks and blockers early to maintain delivery momentum and resolve challenges within tight project timelines.
- Conducted root cause analysis, debugging, and troubleshooting to resolve UI, performance, and functionality issues, delivering continuous improvements to application stability and user experience.
- Contributed to unit testing using Jest, Vitest, and React Testing Library to improve application reliability and release confidence.
- Partnered closely with cross-functional teams including Product Owners, Business Analysts, designers, and backend developers using GitLab, Trello, and Jira to manage Agile workflows, translate mock-ups into responsive applications, and refine API requirements for seamless integration.
- Partnered closely with cross-functional teams, Product Owners, Business Analysts, designers, and backend developers, using GitLab, Trello, and Jira to manage Agile workflows (sprint planning, stand-ups, reviews, retrospectives), translate mock-ups into responsive applications, and ensure timely, high-quality feature delivery.

Social Relations | WordPress and Front-End Developer

February 2020 – May 2021

Social Relations, a Toronto-based tech firm, blends marketing strategies with website and software development, specializing in user-friendly interfaces and backend optimization to support business growth, particularly in real estate.

Responsibilities & Achievements:

- Designed, developed, and maintained WordPress sites and plugins using HTML, JavaScript, CSS, and PHP, delivering stable and performant web solutions aligned with business and client requirements.
- Designed and implemented UX-focused interfaces using Photoshop and Adobe XD, aligning visual design with project goals and business objectives.
- Implemented and configured Google Analytics and Google Tag Manager to track website traffic, analyse user behaviour, and integrate tracking codes and third-party tools.
- Implemented SEO best practices and website optimisation techniques, achieving up to a 40% decrease in page load times and a 71% increase in website traffic while maintaining prominent search engine positions.
- Conducted security audits and implemented protective measures to safeguard client data integrity, reducing security incidents by 24%.
- Collaborated with product managers and stakeholders to translate business requirements into technical solutions, working with solution architects to deliver optimum outcomes.

EDUCATION

Graduated from front-end web development from FrontHooks and Botostart bootcamps.

CERTIFICATION

SheCodes Member, shecodes.io, 2022-2023
